

OBDII Diagnostics

DG TECHNOLOGIES
Vehicle Network Solutions

A diagnostic application for managing vehicle diagnostic repairs by displaying faults, component information and basic vehicle parameters on light through heavy-duty vehicles.

Differentiation

DG Diagnostics is a FREE software included with DPA products that works "right-out-of-the-box" to quickly access common vehicle information, reducing the need to purchase expensive full-featured OEM software.

Key Features

- Display Diagnostics Trouble Codes (DTCs) and DTC Freeze Frame Data
- Monitor all Parameters an ECM supports
- Display Vehicle Information, "total-vehicle" and "trip data"
- Display OBD Monitors supported and their status
- Display Test Results of OBD Monitors
- Produce a user friendly HTML Vehicle Health report
- Record data bus data for engineering analysis
- Configure and launch OEM applications directly
- Clear DTCs

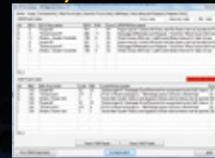

Benefits

- Eliminates the need for multiple adapters
- Greatly reduces reprogramming and diagnostic times
- Capable of running multiple applications simultaneously
- Compatible with OEM software programs
- Two Programs, One Application
 - Medium/Heavy Duty (J1708/J1587 & CAN/J1939)
 - OBDII (SAE J1979 & J2012)

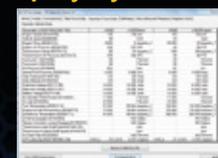

One Application: Two Programs

The diagram shows the DG Technologies logo at the top. Below it, two boxes represent different vehicle types: 'MD/HD' (Medium/Heavy Duty) with a truck icon and 'OBDII' (Light/Medium Coverage) with a car icon. The text 'Medium/Heavy Duty Coverage' is to the left of the truck icon, and 'Light/Medium Coverage' is to the right of the car icon. Below these icons, the text 'DG Diagnostics' is centered, with a note below it: 'Either Application Can Be Used For The 2013 (Or Newer) Volvo Chassis With Volvo Engine'.
